

ROBATA CORTEN FIRE PIT

Robata Corten is a linear outdoor firepit envisioned in weathering steel. With the same proportions as our concrete Robata firepits, this modern fire has been designed to emphasize the material qualities of heavy-gauge steel. The maintenance-free surface of Corten weathering steel provides an earthy yet modern aesthetic that is as practical as it is beautiful. When exposed to the elements, Corten develops a stable rust-like oxidation layer that continually regenerates and protects the steel from corroding.

Robata Corten is available in 4'6" | 1372 mm or 6'0" | 1829 mm lengths by 2'0" | 610 mm in width and formed in 3/16" | 5mm steel. When combined with the standard cover, it becomes a modern outdoor coffee table. It uses our linear fire pit burner in 36" or 48" | 914 or 1219 mm lengths in either natural gas or propane configurations. See it in action here.

Robata Corten Firepit comes complete with a choice of topping medium and a commercial-grade all-season cover. The linear burner features an electronic pilot that can be connected to a wall switch or remote control.

DIMENSIONS & WEIGHT

72" X 24" X 12.5"H (1829 X 610 X 318H). UP TO 400 LBS (180 KG)
