

SOBA MODERN FIREBOWL

Soba is designed to have a smaller footprint than Miso, but no less impact. Standing taller and narrower, Soba is a modern firebowl with a serene but fiery personality that is equally at home at the centre of attention as it is as an accent torch in the garden or poolside.

Soba modern firebowl is equipped with your choice of two burner styles: a manually-lit version with standing pilot and safety thermocouple, or with electronic ignition that may be controlled with a wall switch or wireless remote. Our burners are available for natural gas or propane and are tested and certified to the latest standards for Canada, the U.S. and Europe. At up to 69,000 BTu/hr (25 kW), these fires create not only a brilliant visual display, but create warmth for chilly evenings.

All of our modern fire pits come complete with your choice of topping medium, a commercial-grade all-season cover and are available in a selection of architectural concrete colours. Hard tops are also available if you want to turn your fire pit into an outdoor coffee table when it is not aflame.
